

Precision Energy and Technology has been working with fuel cell technology since 2005 and specializes in producing educational fuel cell kits.

Complete Kit
\$1295

The Precision Energy Fuel Cell Kit reproduces a complete hydrogen energy cycle. This kit allows students and teachers to see first hand the power of hydrogen. This complete kit includes a hydrogen generator cell, fuel cell, gas storage unit, fuel cell tester, load propeller, and a durable storage case.

The electrolyzer is plugged in and begins producing hydrogen and oxygen from water instantly. The gasses are stored in the gas storage unit. When valves are open, the gases are fed to a fuel cell that produces electricity.

This kit includes a tester that gives students the ability to see the open circuit voltage. The tester is also equipped with a variable load knob that simulates consumers of the electricity. When students follow the included experiment, the students will graph the voltage versus current curve showing the maximum power of the fuel cell. Install the load fan and watch the fuel cell drive the propeller.
